

The diagram shows a single process line, which at the final phase of project development will consist of up to 6 drying/deagglomeration units [Process 1] and 2 electrostatic separation units [Process 2] to achieve a throughput of 500,000 tpa.

Key / Notes

CDFA - Coal Derived Fly Ash

Containment silo or building

P - Emission point

P1 - Heater/dryer exhaust

DC - Dust collector

V1 - Silo vent

V2 - Silo vent
