## 1. NON TECHNICAL SUMMARY

### 1.1. Introduction

1.1.1. Site Clear Solutions Ltd (the Operator) operates under a bespoke environmental permit for the transfer and treatment of hazardous and non-hazardous waste (permit number EPR/WE4296AB/A001).

1.1.2. The environmental permit, and planning permission Ref: CH.19/01/778 W, gives Site Clear Solutions Ltd permission to handle up to 21,800 tonnes of waste per annum, of which no more than 3,050 tonnes per annum will be hazardous waste.

1.1.3. Site Clear Solutions Ltd is seeking to vary their existing permit (Permit number EPR/WE4296AB) to include the operation of an Advetec XO22 aerobic digestion unit for treatment of bagged non-hazardous 'offensive' clinical waste generated from the onsite clinical waste transfer station. The application involves the requirement for an aerobic digestion system to be operated on site at Site Clear Solutions, 12-13 Conduit Road, Norton Canes, Cannock, WS11 9TJ.

1.1.4. Within the same permit variation application Site Clear Solutions is seeking to add additional EWC codes to the permitted waste types, which are shown in bold and highlighted in the table in Section 5.

1.1.5. This permit variation is therefore to include:

- The addition of biological treatment activity
- Addition of hazardous and non-hazardous wastes to the transfer activity
- Changes to the site layout

1.1.6. Pre-application advice was obtained for this application, reference EPR/WE4296AB/P001.

### 1.2. Operation of an Advetec XO22 Aerobic Digestion Unit

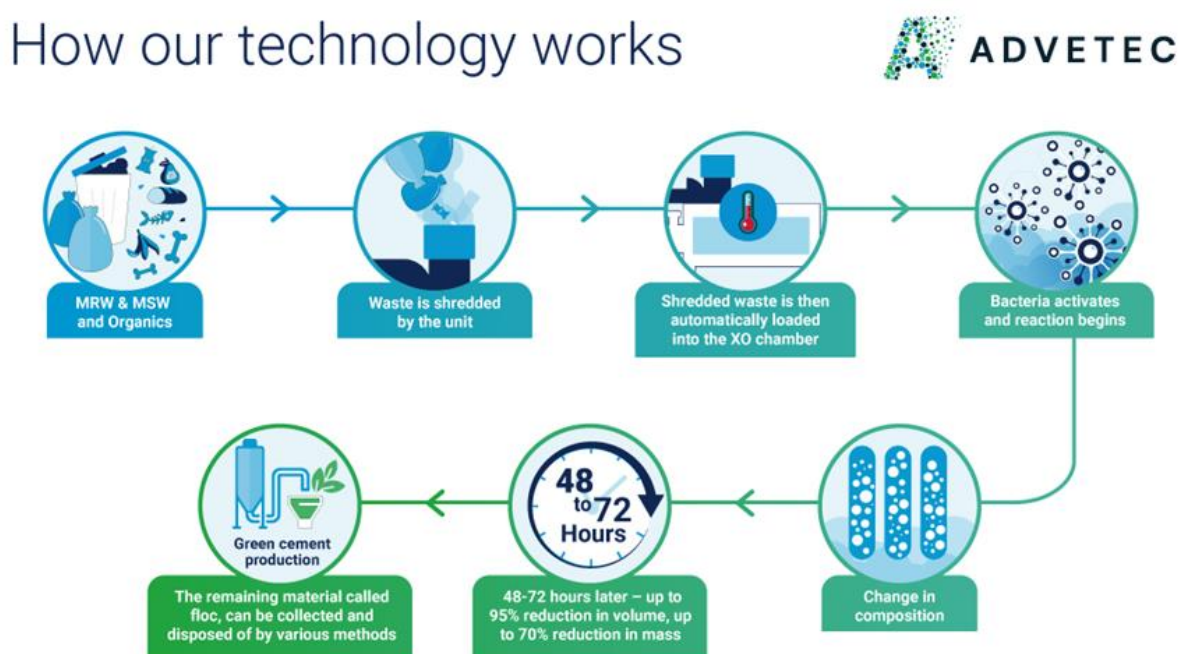

1.2.1. Site Clear Solutions Ltd is seeking to vary their environmental permit to include the operation of 1 Nr Advetec XO22 aerobic digestion system on site at 12-13 Conduit Road, Norton Canes, Cannock, WS11 9TJ, for the treatment of non-hazardous clinical waste.

1.2.2. Aerobic digestion also known as composting is a natural biological process in which micro-organisms breakdown organic material in the presence of oxygen. Aerobic bacteria digest and consume the organic material producing by-products of heat, water vapour and carbon dioxide (CO<sub>2</sub>).

In addition, a solid substrate is generated, called floc, which consists of the remaining non-digested material

1.2.3. Aerobic digestion is typically used to ‘compost’ organic wastes such as garden waste, food waste, and sewage sludge. The process is effective at reducing moisture, reducing mass and volume, and stabilising the organic fraction (which means that the organic fraction will not degrade further preventing the occurrence of odour). As the output (floc) is reduced in moisture it is easier for onward handling and processing. The process accepts a range of feedstocks including food waste, green waste, selected industrial waste and food by-products.

1.2.4. A diagrammatic overview of an aerobic digestion process is provided as Figure 1.

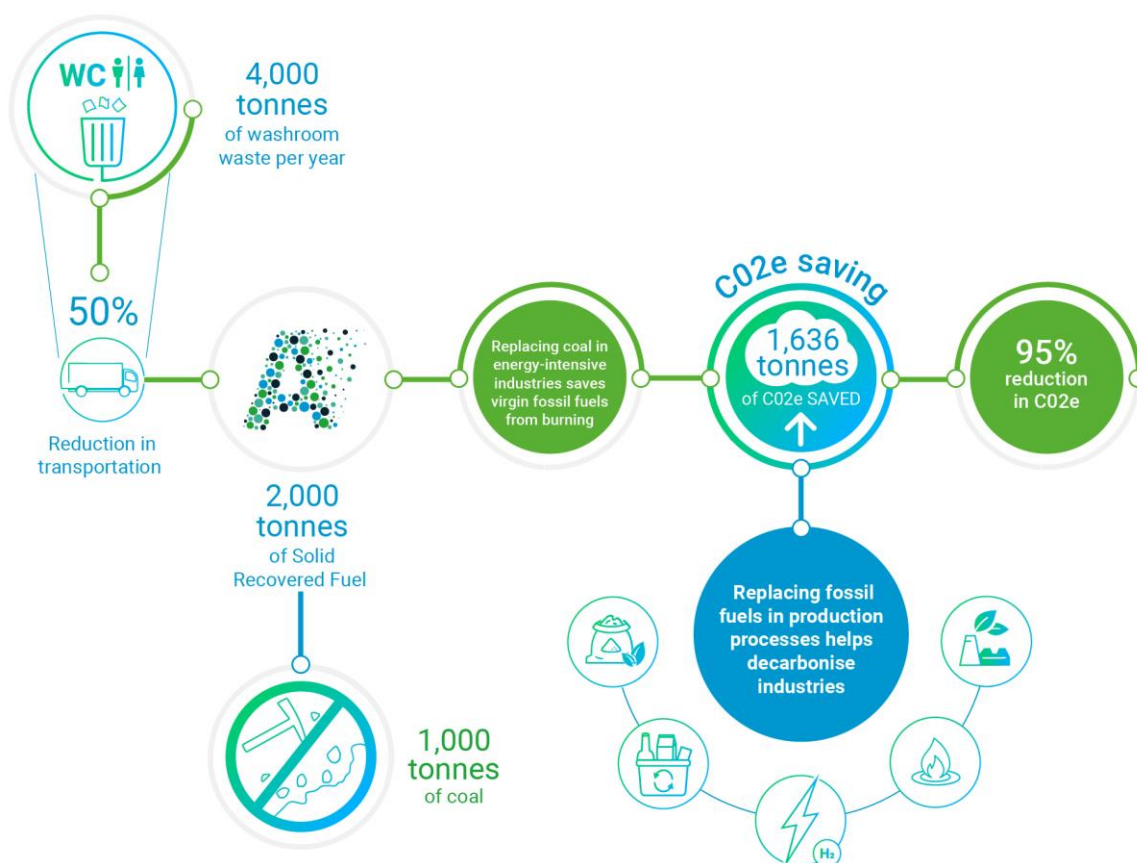

**Figure 1 - Aerobic Digestion Process Overview**

1.2.5. Site Clear Solutions Ltd are permitted to accept non-hazardous clinical waste as part of their existing permit - these wastes have been primarily getting sent to landfill, and occasionally for EfW incineration. Advetec’s biotechnology reduces the mass of waste by 50% offering a sustainable and cost-effective alternative to landfill and EfW incineration. The floc that’s left will be used as a coal replacement product – each tonne of floc used as SRF will replace 0.5 tonnes of carbon emitting coal. The benefits are therefore to allow Site Clear Solutions to stabilise costs in the face of rising EfW / landfill fees, reduce carbon emissions, and to also promote zero waste to landfill. See Figure 2.

1.2.6. As required by Biological Waste Treatment: Appropriate Measures for Permitted Facilities Section 6, Sub-Section 6.2 Bespoke Wastes, the biological treatment process must be capable of fully treating the feedstock required. Analysis has determined that there is sufficient organic matter and moisture for the aerobic biological process (composting) to work successfully with 'offensive' waste being used as the feedstock. This has been further demonstrated through on-site trials with the feedstock at a site in Derby. The biological process is speeded up with the addition of bio-stimulants.

1.2.7. The biological process – composting – stays within expected composting parameters of temperature (no greater than 70 degrees and oxygen content of the waste). Under these conditions there is no breakdown of complex synthetic organic material, therefore posing no threat to human health or the environment. In essence, it's the same process as used in large scale aerobic composting or bio-drying Mechanical Biological Treatment Plants (MBTs), that accept this type of feedstock, nappies etc. as part of the residual waste stream.

1.2.8. The process does not sterilise the waste, as this is not required for onward handling and disposal at the end destination. There is no biological process to stabilise the organic fraction. The process reduces the moisture content which reduces odour and leachate potential whilst making it easier to store and transport. The Advetec process enhances the quality of the waste as an SRF.

**Figure 2 – Advetec Worked example: XO22 unit processing waste into SRF and replacing coal in a cement kiln**

1.2.9. The maximum quantity of waste proposed for treatment by aerobic digestion is up to 8 tonnes per day, 2,440 tonnes per annum. Table 1 lists the wastes which are proposed for treatment by aerobic digestion. The permit variation application seeks to allow the treatment of no more than 8 tonnes of non-hazardous waste per day, equating to 2,440 tonnes per annum.

European Waste Code (EWC)	Description
<b>18</b>	<b>WASTES FROM HUMAN OR ANIMAL HEALTH CARE AND/OR RELATED RESEARCH (except kitchen and restaurant wastes not arising from immediate health care)</b>
18 01 04	Wastes whose collection and disposal is not subject to special requirements in order to prevent infection (for example dressings, plaster casts, linen, disposable clothing, diapers)
<b>20</b>	<b>MUNICIPAL WASTES (HOUSEHOLD WASTE AND SIMILAR COMMERCIAL, INDUSTRIAL AND INSTITUTIONAL WASTES) INCLUDING SEPARATELY COLLECTED FRACTIONS</b>
20 01 99	Other fractions not otherwise specified

**Table 1 – Proposed wastes for treatment by aerobic digestion**

1.2.10. The wastes in table 1 to be treated in the Advetec XO22 aerobic digester are already permitted waste types within the existing environmental permit (permit number EPR/WE4296AB/A001). The 20 01 99 code wastes include incontinence waste, washroom waste including feminine hygiene waste and various other hygiene waste products similar in nature. The source of these includes care homes, offices, café's and so on, which are not from a healthcare or clinical source. Those wastes that are from a healthcare or clinical source are classed as 18 01 04 - these wastes are subject to waste pre-acceptance procedures, in accordance with the Healthcare Waste: Appropriate Measures for Permitted Facilities (December 2021).

1.2.11. Waste awaiting processing will be stored within the clinical waste transfer station which is bagged clinical waste in yellow bins. The volume of waste stored in this area is 73.2m<sup>3</sup>.

1.2.12. The waste will be loaded into a hopper which connects to a shredder, both of which will be located externally, in the yard. The shredder will be located parallel to the Advetec XO22 aerobic digester. The Untha RS40-1000 shredder will shred the waste into 50mm particle size, the shredded waste is then augered into the digester, where bacteria and bio-stimulants are automatically dosed into the waste. The XO22 digester will be located on the yard.

1.2.13. The XO22 is a sealed unit vessel, made of 304 Stainless Steel, which has four chambers, with an internal volume of 22m<sup>3</sup> at any given point, through which the waste is moved for digestion. Movement is by a centralised shaft with engineered paddles that rotate according to pre-programmed algorithms. The paddles allow the system to stay aerobic while ensuring residence, and index mass throughout the process.

1.2.14. The only by-products of the aerobic digestion system are water vapour, carbon dioxide, condensate, which are vented to the air, and a post-process residue (floc, i.e. a loosely clumped mass of particulate material). The process uses exothermic aerobic respiration; therefore, it generates its own heat, which is channelled internally back into the process, using a closed-loop heating system. The process does not use water.

1.2.15. The entire aerobic digestion process takes approximately 72 hours to complete. Post process Floc will be sent through a compactor unit, and then collected and stored in a 40 cubic yard Roll-on Roll-off (RORO) compactor skip, externally, which, when nearing capacity, arrangements will be made for the skip to be swapped with an empty one, and the full one will be transported off site.

1.2.16. Following digestion, an approximate mass reduction of 45-50% and volume reduction of 15% is expected, resulting in an approximate output of 4.4 tonnes of floc. The output is suitable for

onwards recovery off-site as Solid Recovered Fuel (SRF). Analysis of the post XO process floc shows that the floc meets with SRF requirements.

1.2.17. The process is designed to be continuous in nature. The system is fed regularly and will continually discharge floc after digestion is completed.

1.2.18. A basic process flow diagram of the process is provided in Figure 3.

**Figure 3 - Process Flow Diagram of Site Treatment and Storage**

1.2.19. The XO22 is accessible via a regulated cloud-based portal. Data points are collected, logged and stored at programmable intervals, including temperature, humidity, rotational speeds, emissions monitoring, power consumption, maintenance schedules. Alert and alarm levels are programmed into the system to notify in the event of system errors or parameters moving out of range.

1.2.20. The site is operated so that there are no point source emissions to surface water, groundwater, or land. There are two point source emissions to air from the aerobic digester, located at the outfeed end of the process, which is where water vapour, carbon dioxide and condensate are vented. There are no pumps or pipework associated with the process other than the outlet vents which are stainless steel 304 attached to external plastic vent stacks. There is also an in-line gas monitoring system which continuously monitors levels of methane (CH<sub>4</sub>), carbon dioxide (CO<sub>2</sub>), volatile organic compound (VOCs) and Hydrogen sulphide (H<sub>2</sub>S). Preset levels of detection are set on the system and in the event of detection of any of these parameters, an alarm is raised.

1.2.21. The Environmental Permit Boundary is illustrated on Drawing SCS.PT.2002SL, and the layout of the site is illustrated on Drawing 230327SCS104v9b. A picture of an Advetec XO22 unit which treats up to 8 tonnes of waste per day can be seen in Figure 4. An example of the type of shredder and infeed to be employed is included as Figure 5. Both are for illustrative purposes only.

**Figure 4 - XO22 aerobic digestion unit**

**Figure 5 - Example of Shredder and infeed system**

### 1.3. Addition of further EWC codes

1.3.1. Site Clear Solutions Ltd is also seeking to vary their environmental permit to include the addition of EWC codes to the permitted wastes applicable to the recycling and storage facility for non-hazardous and hazardous waste, located at 12-13 Conduit Road, Norton Canes, Cannock, WS11 9TJ. The additional EWC are indicated in bold in Section 5 – Overview of Wastes table.

1.3.2. The addition of new European Waste Catalogue (EWC) codes to the environmental permit does not authorise the acceptance of more waste, nor will any more waste be processed. The inclusion of these codes is to expand the range of waste types that we are permitted to accept, should the need

arise. It is important to note that any waste brought onto the site will still comply with all other applicable regulations and permit conditions, including those related to quantity, storage, and treatment. Site Clear Solutions Ltd will remain committed to responsible waste management practices and will continue to carefully assess all incoming waste to ensure compliance and minimise environmental impact. The average daily throughput at the site will remain the same, which is in keeping with the environmental permit and planning permission annual tonnages. Daily average anticipated throughputs are as follows:

Material Type	Form	Amount (Daily in Tonnes)
Non-hazardous (commercial and industrial, construction, demolition, and excavation)	Cardboard, paper, scrap metal, plastic, mixed general waste, plasterboard, inert, glass	Average: 60
Hazardous	WEEE, batteries, fluorescent tubes, paint, resin & solvents, adhesives, aerosols & oil, asbestos, gas bottles	Maximum: up to 10

1.3.3. It is important to emphasise that the addition of these EWC codes will not result in any changes to the existing storage, handling, or treatment methods currently authorised under Site Clear Solutions Ltd's permit.

1.3.4. The additional EWC codes will be subject to sorting, separation, and repackaging for third party processing. There will be no other treatment.

1.3.5. Wastes that are being added, such as sludges etc., will be subject to pre-acceptance procedures, and if necessary, will be assessed by Site Clear Solution's on-site chemist. All existing current waste acceptance procedures will apply. These such wastes will only be accepted and brought to site if they are already in approved containers, to be stored and then transferred to a suitable permitted facility. Liquid and dusty wastes will also only be accepted and brought to site if they are in approved containers, to be stored and then transferred to a suitable permitted facility. The site has storage bays for wastes dependent on the wastes. Wastes in containers will be labelled and stored appropriately, in accordance with Site Clear Solutions waste handling procedures and SSoW procedures. All liquid wastes will be stored on bunds.

1.3.6. The additional non-hazardous wastes will be stored in accordance with the storage arrangements / procedures for non-hazardous wastes in the existing permit. The external yard storage

areas consist of concrete panel or block storage bays, some of which are covered, 8 cyd skips (one of which is a covered skip for plasterboard waste), a 12 cyd skip, 40cyd skips, a 40 cyd enclosed skip, and a 40 cyd compactor container. Each stockpile will either be separated by a fire wall or have a 6m separation distance. All stockpiles will measure no more than 3m in height. All waste in the external area is stored on an existing impermeable concrete surface.

1.3.7. The additional hazardous wastes will be stored in accordance with the storage arrangements / procedures for hazardous wastes in the existing permit. Storage areas for hazardous materials in the building include the clinical waste in the clinical waste transfer station.

Externally, the hazardous waste storage areas consist of concrete panel or block storage bays, some of which are covered, 40cyd skips, a 40 cyd enclosed skip, and 2 cages for the storage of waste gas bottles. Each stockpile will either be separated by a fire wall or have a 6m separation distance. All stockpiles will measure no more than 3m in height. All waste in the external area is stored on an existing impermeable concrete surface or a proposed concrete surface.

## 2.0 Permitted Waste Operations

2.1. The activities at the site will be regulated as a bespoke waste operation as per the Environmental Permitting (England and Wales) Regulations 2016 (as amended).

2.2. Waste management activities as described in the Waste Framework Directive 2008, which are currently undertaken as part of the operations on site include:

- R3 – Recycling / reclamation of organic substances which are not used as solvents (including composting and other biological transformation processes);
- R4 – Recycling / reclamation of metals and metal compounds; and
- R5 – Recycling / reclamation of other inorganic metals.
- R13 – Storage of wastes pending any of the operations numbered R1 to R12 (excluding temporary storage, pending collection, on the site where it is produced);
- D15 – Storage pending any of the operations numbered D1 to D14 (excluding temporary storage, pending collection, on the site where it is produced);

2.3. The following waste management activities as described in the Waste Framework Directive 2008 will be undertaken at the site as part of the aerobic digestion process. These include:

- R3 – Recycling/reclamation of organic substances which are not used as solvents (including composting and other biological transformation processes);
- R5 – Recycling / reclamation of other inorganic materials; and

- R12 – Exchange of wastes for submission to any of the operations numbered R1 to R11.

### 3.0 Application Overview

#### 3.1. Environmental Risk Assessment

3.1.1. The Environmental Risk Assessment has considered odour, fugitive emissions, dust, releases to water, litter, mud, birds, vermin and insects, and potential for accidents and incidents. The assessment concludes that with the implementation of the risk management measures described, potential hazards from the proposed development are not likely to be significant.

#### 3.2. Site Condition Report

3.2.1. The Site Condition Report within the Environmental Management System (EMS) details the condition of soil and groundwater at the site. It contains the information necessary to determine the current state of soil and groundwater conditions at the site, so that a comparison can be undertaken upon the eventual cessation of activities.

#### 3.3. Fire Prevention Plan (FPP)

3.3.1. The Fire Prevention Plan details the required mitigation and management methods to prevent a fire of combustible materials stored on site.

#### 3.4. Odour Management Plan

3.4.1. The Odour Management Plan (OMP) outlines the methods by which the operator can systematically assess, reduce, and prevent potentially odorous emissions from the facility in order to meet the Environmental permit odour conditions for the site.

#### 3.5. Dust and Emissions Management Plan

3.5.1. The Dust and Emissions Management Plan (DEMP) outlines the methods by which the operator can control and minimise the release of dust and other pollutants from the facility, in order to meet the Environmental permit emissions conditions for the site.

#### 3.6. Bioaerosol Risk Assessment

3.6.1. The Site Specific Bioaerosol Risk Assessment (SSBRA) assesses potential impacts associated with the operation of an aerobic digestion unit at the Site Clear Solutions Limited's site. The objective of the SSBRA is to establish the likely sources of bioaerosols arising from proposed operations at the site, identify the proposed mitigation and control measures to minimise potential

offsite risks, assess the potential for significant risk of impact to human health at sensitive receptors located in the vicinity of the plant as a result of bioaerosol emissions from the process, and identify any additional mitigation required to control potential effects.

#### 4.0 Key Technical Standards

4.1. Key technical standards laid out in the following documents have governed the design and proposed operation of the Site:

- Develop a management system: environmental permits, April 2023;
- Control and monitor emissions for your environmental permit, November 2022;
- Environmental Permitting Regulations - Site Condition Reports Guidance and Templates (version 3 April 2013);
- Risk assessments for your environmental permit, January 2025; and
- Biological waste treatment: appropriate measures for permitted facilities, November 2024
- Healthcare Waste: appropriate measures for permitted facilities, December 2021
- Chemical Waste: appropriate measures for permitted facilities, November 2020
- Non-hazardous and inert waste: appropriate measures for permitted facilities, August 2023

4.2. Due to the small scale of the aerobic digester, the risk to sensitive receptors is considered low. However, the following control measures have been determined through the risk assessment and will be implemented to ensure that the site does not give rise to significant environmental impact. They are summarised below:

- Activities are managed in accordance with an environmental management system
- Performance against the management system is audited at regular intervals
- Odour management measures will be employed to ensure odour emissions are minimised from the site
  - Post-process floc will be collected into a compactor and stored until taken off site
- Noise management measures will be employed to minimise emissions of noise including;
  - Machinery is always operated so as to minimise noise
  - Vehicles will adhere to a speed limit when accessing the site
- Strict waste acceptance procedures, detailed in the EMS, will be adhered to, to prevent odour and contamination.

- Daily observational monitoring is undertaken at the site boundary, for odour, noise and dust emissions.

## 5.0 Overview of Wastes

5.1. The site is seeking to vary their existing permit (Permit number EPR/WE4296AB) to also incorporate additional EWC codes, which are indicated in bold in the following table.

European Waste Code (EWC)	Product Description	Destination within facility				Process
		Industrial Building	Covered External Yard Bays	External Yard Bays	External Yard Skips	
01 03 04*	Acid-generating tailings from processing of sulphide ore	No	Yes	Yes	No	Sorting, processing and storage
01 03 05*	Other tailings containing hazardous substances	No	Yes	Yes	No	Sorting, processing and storage
01 03 06	Tailings other than those mentioned in 01 03 04 and 01 03 05	No	Yes	Yes	No	Sorting, processing and storage
01 03 07*	Other wastes containing hazardous substances from physical and chemical processing of metalliferous minerals	No	Yes	Yes	No	Sorting, processing and storage
01 04 07*	Wastes containing hazardous substances from physical and chemical processing of non-metalliferous minerals	No	Yes	Yes	No	Sorting, processing and storage
02 01 03	Plant-tissue waste	No	Yes	Yes	No	Sorting, processing and storage
02 01 08*	Agrochemical waste containing hazardous substances	No	Yes	Yes	No	Sorting, processing and storage

## 6.0 Conclusion

6.1. Apart from the addition of the treatment using the aerobic digester, involving shredding prior to the wastes being fed into the digester, there are no additional processes requested as part of this permit variation application.

6.2. The overall conclusion from the studies undertaken as part of the application is that there is unlikely to be a significant environmental impact as a result of changing Site Clear Solutions Limited's site operations to include the operation of the Advetec aerobic digester, and the addition of the EWC codes to the permitted waste types. Site Clear Solutions Limited is fully committed to ensuring the highest standards are met and will undertake its activities in a manner consistent with best industrial practices and in accordance with the company's environmental policy and management system.

6.3. It is therefore considered that the permit variation should be issued as detailed above.
