07<sup>th</sup> November 2018

Dear Sirs

Please find enclosed an application for a Part A(1) Environmental Permit on behalf of the operator Impalloy Limited.

Impalloy are currently the operators of permit JP3538LX/V005. The permit was subject to a BAT review during 2017 as part of the non-ferrous sector review following the re-issue of the BAT document. There were no issues raised from that review. The BAT review spreadsheet completed during process and the decision document for the variation of the permit have been included in the application pack.

Impalloy are located on a leased facility and the facility has recently changed hands to a new landlord. The landlord has recently given Impalloy until mid-February to vacate the site since it is planned for redevelopment. Due to the nature of the product that they manufacture, Impalloy are not in a position to stock pile product but must relocate to a new site in a short time frame to satisfy existing orders.

By and large the existing plant and equipment will be relocated to the new site. The new site is slightly smaller so not all furnaces will relocate. Directly Associated Activities remain the same.

Regards

Nicola Adams  
Principle Consultant
