Hi Nicola,

Thank you for your submissions, I'm pleased to confirm that once we have received the drainage plan for the site I should be able to duly make your application.

With regards to the inclusion of the gas heater as a point source emission. Providing this heater of a domestic size, this will not need including into the permit.

Thank You & Kind Regards,

Rachel Hopkin BSc Hons Chemistry

Rachel

Further to our telephone conversation earlier today please find attached a copy of our response to the Not Duly Made letter.

We were unable to finalise the drainage plan today – this will be forwarded to you under a separate email by the end of the week. This will include the location of the diesel tank, which will be positioned inside the building.

I have addressed all of the points raised by amending the supporting document and the H1 risk assessment. Any amendments made that differ from those submitted at the time of the application have been made in red.

I have visited the new site today and there is a heater in the fabrication area (already installed) that we intend to keep. The heater (gas blower) has a flue which discharges through the roof of the building. Do we need to add this as a release point or not?

I have attached the revised form F1, as requested. A payment has been made today using reference PSCAPPIMPAL315, which is the same reference as that used for the original application.

If you require any further information from me then please do not hesitate to contact me.

Regards

Nicola
