1. Non-technical summary

1.1. The Facility

The Bridgnorth Recycling Facility 'BRF' currently accepts mainly flat screen display units which are processed by a series of mechanical and manual dismantling stages to generate high quality material streams suitable for reprocessing in secondary plastics or metal sectors. The facility also processes smaller volumes of other electrical items such as small WEEE. The facility also has the necessary security protocols and infrastructure to undertake secure destruction of pre and post consumer items, preventing unsuitable material entering the grey market and ensuring efficient compliant recycling. The facility is an Approved Authorised Treatment Facility 'AATF' and an Approved Exporter 'AE'.

1.2. Permitting history

The facility was permitted in July 2016 under a standard rules permit for processing up to 75kte of WEEE (authorised treatment facility excluding ozone depleting substances - SR2015No15). The standard rules set was updated by the Environment Agency in 2019 and as a result some activities carried out at the site were no longer in scope. A bespoke Installation permit was issued in 2020 with the scope of incoming wastes restricted to two EWC codes assigned to hazardous WEEE (16 02 13* and 20 01 35*).

2. Location

The facility is located at:

Faraday Drive
Bridgnorth
Shropshire

Grid reference: SO 72860 92219

3. Scope of Variation

3.1. Summary of required permit changes

This variation is principally to broaden the waste types that can be accepted at the facility. Currently the facility is licensed to accept hazardous WEEE which is principally in the form of flat screen display units. The facility also accepts smaller volumes of small WEEE.

The combination of skilled technicians and automated processing capability on site mean the facility is adaptable and readily capable of treating other wastes types to produce high quality recyclable material streams. As well as the hazardous WEEE already treated this capability includes non hazardous waste and non WEEE.

The list of wastes 'LOW' is divided by sector and as such, waste items / material could therefore be of a similar composition with different origin. The additional proposed codes will allow the facility to respond to requests for material recycling and secure destruction services across a wide spectrum of industrial and commercial sectors. The waste types are those which the existing facilities on site are already capable of treating and pollution risk is not being increased. This would include wastes in a variety of formats that are composed principally of metal and plastic although we have allowed for other material types such as textiles and wood / furniture. EWC ending in '99' are designated to capture material which does not easily fit into the other available categories. As it is not possible to anticipate every enquiry into the BRF we propose adding the available '99' codes with a pre-approval cycle which will need to be agreed in advance of acceptance. We have proposed an approved characterisation mechanism for these waste streams subject to regulatory approval process mirroring a similar approach already used in another sector. The risk is confined by the small waste storage volumes linked to the activity.

Waste types will not include whole end of life vehicles, those which are dusty or odorous or those containing ozone depleting substances or PCB's. There will be no changes to the core processes on site and these will include a mixture of manual and mechanical dismantling techniques.

This variation also captures some minor changes which have occurred to the external storage facility which includes the recent construction of a covered Legioblock storage area. The facilities operating procedures have been updated to include future installation of a small shredder for secure destruction purposes.
