Hi there,

I have attached application form for the pre-application of EPR/ GP3101LS/A001 for a new finisher unit to be built where there is already an existing gilt unit (which had doesn't have an existing permit due to being below permit number requirements) under JSR farms for over 2000 finisher pigs.

All documents relevant to the application form are attached, eferenced to within the application form where they are required, if any information needs updating I will email this over or you need any other details please let me know.

Payment has been made on the 29/10/2021 via BACS, reference number for this is included within the form (PSCAPPJSRFA982).

The site plans only currently include the plans for one of the finisher units as the second we are planning to build in the future however we haven't put planning together for this yet – once we do I will update all site plans within the permit to reflect this. I hope this is all okay (I do have a question on the installation boundary regarding this if whoever is dealing with the application could get in touch with me that would be much appreciated).

Any questions please let me know, I look forward to hearing from you.

Thanks
Ellie

Kind Regards,
Ellie Stephenson
