**Selection & use of feed**

- Selection and use of feed is in accordance with SGN EPR6.09 'How to comply with your environmental permit for intensive farming'
- Protein and phosphorus levels in the rations are matched to the animal's needs. A record of the percentages of nutrient levels is kept.
- A nutritionist is employed to review and reformulate diets in order to optimise production and minimise excretion of nutrients. Synthetic amino acids are used to ensure that the protein needs are met with the use of minimum amount of protein in the diet.
- Feed is stored in purpose built, covered feed bins and are located next to the pig sheds. Milling and mixing of the feed takes place off farm. Dry feed is delivered to the farm by lorry from the feed supplier for pigs. Feed is blown directly into the relevant feed bins.
