

Technical Ability - Operator Competence

Technical competence for the site will be provided by Nicole Feakes, Environmental Manager at British Sugar. Her current qualification accreditation number is 601/8499/1 and her WAMITAB certificate is attached in pdf format (Nicole Feakes - Competence Certificate). This qualification is sufficient to manage the current pre variation activities on site. She will undertake the following training in advance of the permit being varied, which will cover the competence required to manage the activities proposed within this permit variation application.

- *Manage the movement, sorting and storage of waste (OCS05)*
- *Manage the reception of inert waste (OCS13)*
- *Managing disposal operations of inert waste to land (OCS35)*

These units are those advised by the Environment Agency Site Inspector for York, Roy Mantas, as those required to manage the site under a Deposit for Recovery Permit. See copy of email below.

Subject: RE: [External] TCM requirements for Deposit for recovery activity

Hi Paul,

Unfortunately the Closed Landfill Qualification doesn't cover many of the waste acceptance requirements listed below that are necessary for an active DFR site.

- Manage the movement, sorting and storage of waste (OCS05)
- Manage the reception of inert waste (OCS13)
- Managing disposal operations of inert waste to land (OCS35)

Obviously the Closed Landfill qualification is suffice for the site currently.

Cheers

Roy
