

Appendix 12: Housing and Drainage Review

The proposed installation (see Appendix 4) is in line with BAT guidance in terms of design and management. Routine maintenance schedules (please see Appendix 3) will maintain these standards and we will regularly review any areas which could be improved in the future.

1. Is manure and dirty water managed to the standards in How to Comply?

Manure is stored on impermeable muck pads, with all effluent draining to the reception pits and into the dirty water tanks.

The gradients and curbing of outside areas is designed to ensure protection of clean water drainage systems. Uncontaminated roof water is collected via gutters and down pipes and is piped and discharged to soakaways as detailed on Appendix 4.

2. Is ventilation managed to the standards in How to Comply?

Ventilation is managed to BAT - no further action required

3. Is temperature managed to the standards in How to Comply?

Temperature is managed to BAT - no further action required

4. Does the general management conform to the standards in How to Comply?

Buildings and the wider installation are managed to BAT - no further action required
