

WORK INSTRUCTION W.I. EMS 8 V1

LIQUID FILTER CLEANING

Filters used in liquid pumping and circulation systems require cleaning from time to time.

These filters can contain environmentally harmful materials and care must be taken to protect the environment from any possible contamination as a result of the cleaning process.

- Do **NOT** clean filters in any sink.
- Transport the dirty filter in a bucket to the washing area for cleaning ensuring all liquid effluent goes to the interceptor.
- Ensure solids are disposed of as general waste
- All cleaning rags and materials must be disposed of as Hazardous waste as per WI EMS 9.
