

## WORK INSTRUCTION W.I. EMS 18 V1

### VEHICLE WASHING

Water is a valuable resource and must be conserved as much as possible.

The effluent from vehicle washing is a potential environmental pollutant and care must be taken to ensure minimisation of the potential environmental impact.

- The vehicle must be parked in the centre of the vehicle wash bay to ensure that all effluent is collected in the bay and discharges into the soiled wash water tank.
- Only use environmentally approved detergents, as specified in the Drivers Handbook, at the recommended concentrations.
- In the event that the soiled wash water tank becomes full, report it to the Production Manager or his deputy who will arrange for compliant disposal.
- Vehicle washing must be suspended until the soiled water system serviceable.
- The pressure washer must be serviced regularly.
